Dear Sir, Please note that In the section 3.3.2, it says that the Number of RCS Flights to be operated in a week with VGF shall be a minimum of 3 and maximum of 7 departures from the same RCS Airport Our question is: Whether this limit of 3 and 7 pertains to departures to a particular Airport (say A) or sum total of all the departures to any Airport (say A,B,C,D taken together)?	The said clause pertains to a particular RCS Flight and therefore the limit of 3 and 7 pertains to departure from an RCS Airport (say A, where the said RCS Flight originated) to a particular destination airport (say B) of such RCS Flight. The sum total of all departures from a RCS Airport is relevant for the purpose of determining whether an airport is Underserved airport or not. A particular RCS Airport can be connected to more than 1 destination with each having minimum 3 and maximum 7 RCS Flight departures subject to the RCS Airport satisfying the definition of an under-served airport before allowing any new RCS Flight. As an illustration, if A is an RCS Airport with no flight departures currently, and an RCS Flight is proposed between A and B, such RCS Flight can have minimum 3 and maximum 7 departures in a week from A. Similarly, another RCS Flight can be taken from airport A to another airport (say C) with minimum 3 and maximum 7 departures from A to C. Subsequently, once the total number of departures at A becomes more than 7, it will cease to be an RCS Airport under the Scheme.
