S. No.	Document	Clause No. and Existing Provision	Clarification Required	Suggested Text for Amendment, if any	Rationale for Clarification or Amendment	Response
1.	Tender Document	9.1	i) The reserve price is 5% of value of minerals dispatched in a month which will lead to disparity amongst high grade and low grade graphite, as the selling price of Graphite is FC% and flake size driven. Lower the grade lower the price and higher the grade higher the price. Is there any mechanism to level such disparities? ii) Secondly mines sold through auction will always have a disadvantage with comparison to existing lease holders who will not have to pay the bidders' share. What does the GOO thinks in this regards.		i) IBM avg sale price is broadly under only 3 categories i.e. a) <40%FC b) 40> &<=80% FC c) >80% FC	No change in the tender condition
