3) Methodology of allocation for the E-Auction PQT Method

Price Quantity Time (PQT) Allocation Rules

In a Price Quantity bidding system, allocation of material is carried out based on three parameters in the following priority order:

i) Price (Highest Priority)

· Bidders quoting a higher price are given priority in allocation.

· The bidder with the highest price (H1) is allocated material first.

· If the total quantity offered by the H1 bidder is less than the available lot quantity, the remaining quantity is allocated to the next highest bidder (H2), and so on.

Example:

· Total Lot Quantity: 100 units

· Bidder A: 120/unit for 60 units

· Bidder B: 110/unit for 50 units

Allocation:

· Bidder A (H1) gets 60 units

· Remaining 40 units go to Bidder B (H2)

ii) Quantity (Second Priority, when prices are equal)

· If two or more bidders quote the same price, priority is given to the bidder who has quoted the higher quantity.

Example:

· Total Lot Quantity: 100 units

· Bidder A: 120/unit for 70 units

· Bidder B: 120/unit for 50 units

Allocation:

· Bidder A gets 70 units (higher quantity)

· Remaining 30 units go to Bidder B

iii) Time (Third Priority, when both price and quantity are equal)

· If both price and quantity are identical, priority is given to the bidder who placed the bid earlier in time.

Example:

· Total Lot Quantity: 100 units

· Bidder A: 120/unit for 50 units (bid placed at 10:00:00 AM)

· Bidder B: 120/unit for 70 units (bid placed at 10:00:01 AM)

Allocation:

· Bidder A gets 50 units (earlier bid)

· Remaining 50 units go to Bidder B
